Aircraft Details

The Morovan Aeroplanes AS, model ZLIN 143LSI, registration ANX-1501, serial number 970, has a total time since new of 1,419:50 flight hours and 814 total landings. It has a valid Standard Category Airworthiness Certificate number SM-AM-0058, issued by their own Naval Aviation Authority on 15th July 2024 and valid through 15th July 2025.

Accident Circumstances

During the last flight, the pilot reduced power too high before the runway threshold and allowed the aircraft to touch-down heavily on the right landing gear leg and bounce. The right undercarriage installation broke away from the tubular fuselage and the wing collapsed; hence, after the rebound, the aircraft veered off the runway.

Aircraft Damage

Please refer to the photographs

The front fuselage structure is distorted at the engine attachment points and where the wing and landing gear leg attach; and the upper and right skins aft of the cockpit are wrinkled. The right landing gear leg and tyre require replacement; and the left main and nose landing gear legs require conditional inspections with overhaul criteria. The right wing and propeller grounded.
