

Claim	: 21135
Aircraft	: Agusta A109E helicopter, TI-BJX
Location	: Guanacaste Airport, Liberia, Costa Rica
Being offered	: As is where is
Contact Information	: Francisco Ortega <franciscoortega@aav.global>

Aircraft Details

The Agusta A109E helicopter, registration TI-BJX, serial number 11615, has 2,604 total flight hours since new; the last maintenance action was a 50-hour inspection carried out on 14th April 2023.

After reviewing the logbooks, Francisco Ortega confirmed that the engine major components had residual time for overhaul and that the preventive maintenance was in order.

Accident Circumstances

The Agusta 109E landed heavily after losing power on approach to Guanacaste Airport near Liberia in Costa Rica.

Aircraft Damage

Please refer to the photographs

The helicopter fell heavily on the right side and, with the whiplash effect, the tailcone partially separated from the main fuselage structure. The tail stinger hit the ground just before the landing and the complete tail rotor assembly separated from the tailboom. Without having to inspect the structure closer, we can be sure that the 3 rear composite bulkheads on the right side of the main fuselage structure will be crushed, and the floor and roof will be twisted.
