Aircraft Details

Hydra Technologies S-4 “Ehécatl” Remotely Piloted Aircraft (RPA), serial number 29.

Accident Circumstances

On 22nd April 2020, during a training and systems verification flight, the pilot-operator incorrectly increased the angle of attack of the drone without applying enough power; therefore, the wing lost lift and stalled. The aircraft spun out-of-control into the ground

Aircraft Damage

The airframe, undercarriage, propellers, fuel tank, antennas, electrical wiring, cargo bay, camera bay, and antennas are junk. Both motors need repair. GPS, INS and Datalink systems must be inspected. The surveillance camera (Tigre II) was not installed on the aircraft when it crashed.
